

HUMAN CENTERED DESIGN FOR STRYKER GROUP

Medical technology innovation market

Concepts and design services for a reliable operating room (OR).

Successful innovation in this pilot project brought Stryker Germany into the international spotlight and emphasized their strategic European location.

Each operation plan is coordinated individually, taking the patient's and the medical team's needs in the OR into consideration.

Stryker Navigation Camera

The Stryker Navigation System allows maximum flexibility when positioning the navigation elements in the room: a camera, two monitors, mobile computers and various interfaces.

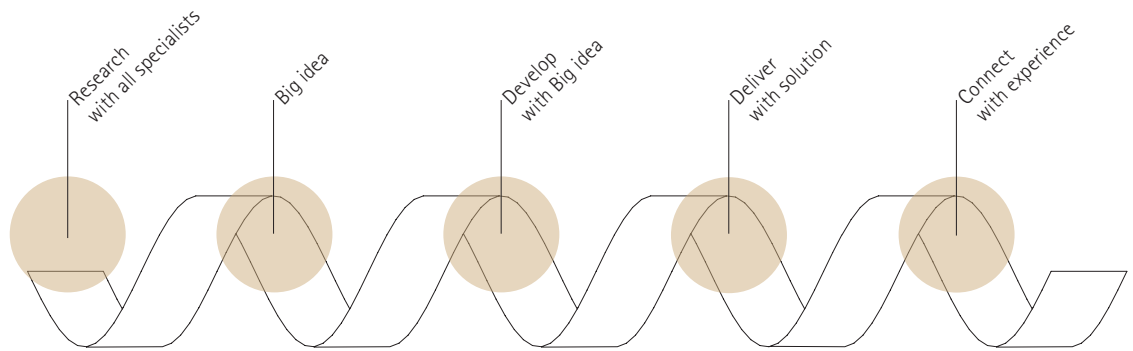

The consistent modular design of the Stryker Cart simplifies the setup of operations for interventions to the throat, nose and ears, hips, knees and back.

In addition, standardization of the cart was achieved by using available components.
